Silicon Valley Products
PC Service Solutions

Over 25 Years of Technology Service Experience

PC maintenance and upkeep is critical to the success of your business. A slow running or infected computer means a day of lost productivity. With simple monthly updates Silicon Valley Products can avoid these issues and ensure maximum performance for your machines.

Our successful service plan is based around remote manual updates, as our trained staff will login into each of your office's computers to conduct servicing and maintenance. **Unlike our competitors who do nothing until a problem has occurred, we take a proactive approach to ensure continued stability and future prevention of any computer issues.**

Our service plans are affordable and scheduled around non-work hours to avoid work interference. Features and benefits include:

- System updates for Windows and Microsoft Programs

- Updates for Java and Adobe to avoid viral threats, as PDF's and Java are two of the largest entry points for viruses into a computer

- Scanning with multiple security programs to avoid spyware, malware and viruses on your machine, along with immediate removal of any threats.

- Free tech support available 7 days a week

Silicon Valley Products has a wide array of IT experience for multiple industries including insurance and financial services.
